Hazardous Weather

Hazardous Weather

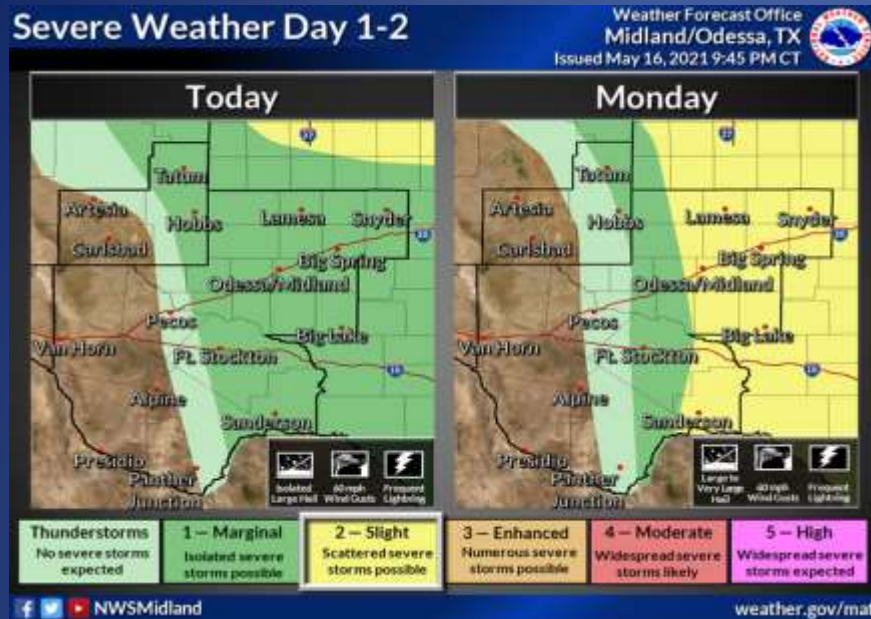

Somewhat of a repeat of Saturday is in store for Sunday, with severe storms once again possible during the late afternoon into the late evening hours. Thunderstorms will likely develop in the northwestern Panhandles after 5pm, with up to 2 inch diameter hail and up to 70 mph wind gusts possible. The tornado risk remains low. While not likely, if storms track over the same areas as yesterday, some flash flooding risk may develop.

Isolated severe thunderstorms are expected along and east of a dryline Sunday afternoon and evening. Storms that do form may be particularly intense, capable of producing large hail, damaging wind gusts, and heavy rainfall. A tornado risk may develop late in the night as well, though the potential is low.

Hazardous Weather

Severe Weather Day 1-2

Strong to severe storms will be possible across the east today. Damaging winds and hail will be the main threats. On Monday, severe storms will be possible across the Permian Basin and Lower Trans Pecos, with large to very large hail and damaging winds as the main threats. An isolated tornado or two may also be possible.

Severe Potential Sunday Evening

Thunderstorms are again expected Sunday evening and overnight. Some storms may be severe with damaging winds and large hail the primary threats.

Hazardous Weather

Isolated to scattered thunderstorms are possible today. Highs will be in the upper 70s to mid 80s.

Weather Warnings/Advisories Issued

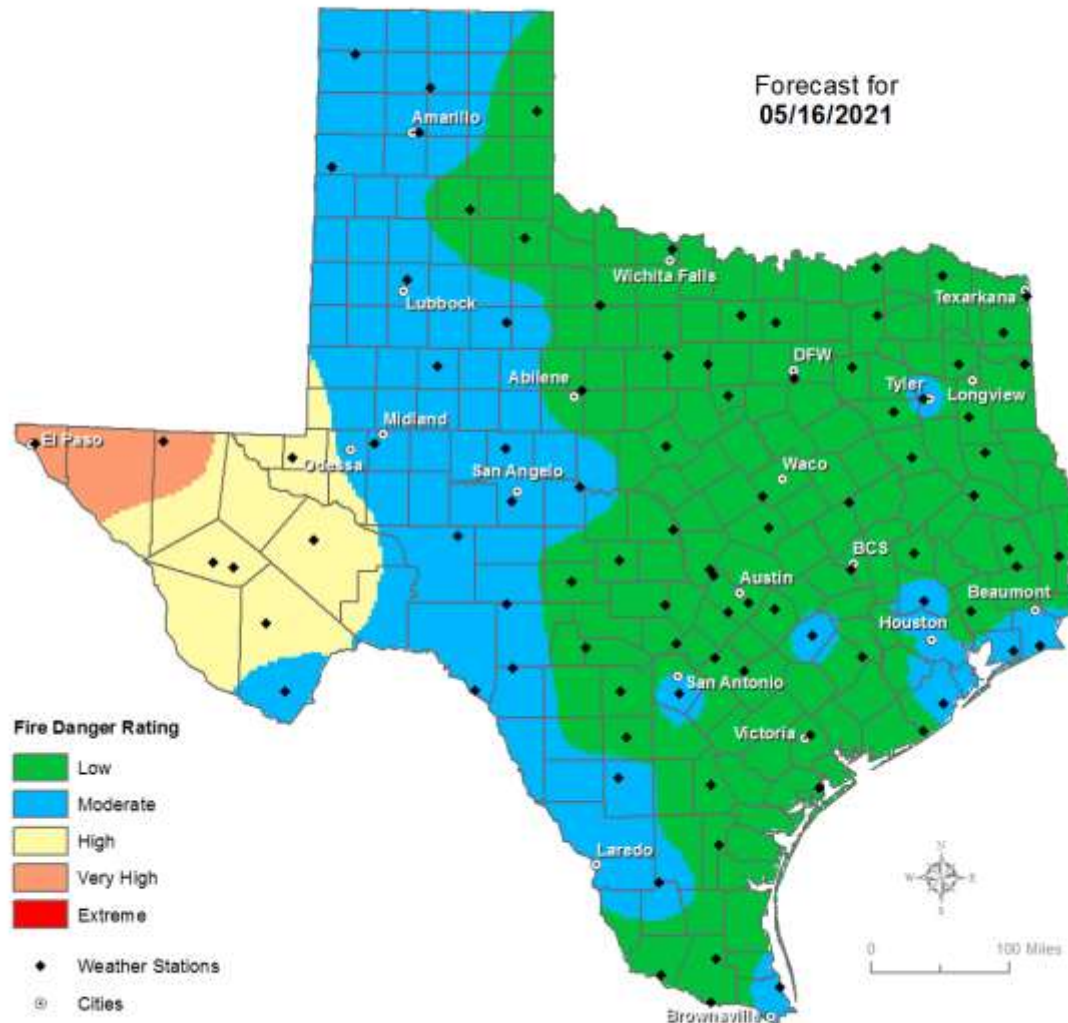

DATE	WARNING TYPE	LOCATION
05/15/21	Tornado Warning	Duval, Hidalgo, McMullen and Willacy Counties
